KNOWLEDGE

Insights From CRM Deactivation

Presented By: Mohammed Sharraf Uddin

CONTEXT & METHODOLOGY

Problem Statement

Analyze the "Deactivated Accounts Report" to understand churn drivers and identify actionable strategies.

Methodology: Looker Studio

Data Cleansing: Standardized "Reason" and "Team Member" fields (e.g., grouping similar reasons)

Relationship Matrix: Mapped churn reasons to specific account managers (Account Team Member).

Time-to-Churn Analysis: Calculated the exact lifecycle of lost accounts (Verified via Spreadsheet)

PRIMARY CHURN DRIVERS

Account for ~76% of losses

WHY ARE THEY LEAVING

Key Insight: "No longer needed/required" is the dominant cause, indicating a critical failure in adoption and perceived long-term value, rather than a financial or competitive issue.

ACCOUNTABILITY MATRIX

Churn is not evenly distributed. Some specific team members have higher deactivation rates, tied to specific reasons.
